K-BYTES
The Next Generation of SHA 256 Mining Activities

+62.818.678.818

About K-BYTES

- **Introduction**
  K-Bytes (KBT) is a crypto protocol designed to democratize mining access. Unlike traditional Crypto currencies that require expensive hardware, K-Bytes enables users to mine directly from their Android smart phones without compromising network security or causing overheating and excessive energy consumption.
- **Vision**
  To become the leading global ecosystem in mobile-based block chain technology, empowering every individual to participate in the digital economy through accessible and sustainable mining solutions.
- **Mission**
  - **Accessibility:** To eliminate the high entry barriers of crypto mining by providing a user-friendly platform compatible with everyday smart phones.
  - **Sustainability:** To promote eco-friendly block chain operations by minimizing energy consumption and reducing the carbon footprint of digital asset production.
  - **Security & Integrity:** To maintain a robust and secure decentralized network while ensuring optimal hardware performance for all users.
  - **Empowerment:** To foster financial inclusion by giving people worldwide the opportunity to earn digital rewards without the need for specialized equipment.

Technical Spec

- **Minimum Spec Mining Tools:**
  - **Operating System:** Android 12 or higher.
  - **Processor (CPU):** Quad-core 1.8 GHz (64-bit architecture).
  - **RAM:** 4 GB recommended for background stability.
  - **Storage:** 200 MB of free space for app installation and local cache.
  - **Internet Connection:** Stable 4G LTE.

- **Recommended Spec Mining Tools:**
  - **Operating System:** Android 12 or higher.
  - **Processor (CPU):** 8-core s 1.8 GHz (64-bit architecture).
  - **RAM:** 8 GB recommended for background stability.
  - **Storage:** 200 MB of free space for app installation and local cache.
  - **Internet Connection:** Stable 4G LTE.

Software Spec

- **Development Tools:**
  - **IDE and Compiler:** Android Studio Panda 4 2026.
  - **Language:** Java and JNI C++ .
  - **Encryption:**
    - Deterministic SHA 256 for Mobile Apps.
    - AES CGM 256.
    - Elliptic Curve.
  - **Decentralized Database:**
    - SQ Lite.
    - SQ Lite Chiper.
  - **Full Node Database:**
    - PostgreSQL.
  - **Pure 100% Open Source Development Software.**

Tokenomics

- **Summary:**
  - **Total:** 150.000.000 KBT (K-BYTES).
  - **Developer:** Fair Lunch.
  - **Miners:** Fair Lunch.
  - **Angle Investor:** Fair Lunch.

- **Important Notes:**
  - K-Bytes does not implement traditional tokenomics; instead, all coins must be earned through a **Proof of Work (PoW)** logic. Every transaction and block is electronically and automatically validated by other miners within the network, ensuring a fully decentralized process without any human intervention.

Application Facilities

- **Wallet:**
  - **Encryption:** Ecliptic Curve.
  - **Seed Phrase:** 12 words.
  - **PIN:** based on user PIN , encrypted in SQ Lite with SQL Chiper.
  - **Backup:** Self backup to Email and can be saved personally to flash disk.

- **Mining Application SHA 256 level 6 and above:**
  - **Work Order (*) with Merkle Tree :**
    - Ecliptic Curve combined with
      - Contract Address
      - Miners Wallet
      - Previous Work Order
      - Previous Hash
      - One Time Key with AES CGM 256
  - **Delivery Order with Merkle Tree Logic:**
    - Work Order (*) combined with Miner's detail activity
      - Nonce
      - Hash
      - Hash Power

Application Facilities

- **Send and Receive SHA 256 level 5 :**
  - **Work Order (**) with Merkle Tree :**
    - Ecliptic Curve combined with
      - Contract Address
      - Sender Wallet and Receiver Wallet
      - Previous Work Order
      - Previous Hash
      - One Time Key with AES CGM 256
  - **Delivery Order with Merkle Tree Logic:**
    - Work Order (**) combined with Miner's detail activity
      - Nonce
      - Hash
      - Hash Power

- **Validator:**
  - Every user of the K-BYTES mining application is a **Validator** without exception. As soon as a miner goes online, they are immediately integrated into the network as both a miner and a validator.
  - Validator will validate:
    - One Time Key
    - Work Order and Delivery Order by re-Markle Tree once more, then check SHA 256 Task, Difficulty, Nonce and Hash.
    - All these combination is needed to ensure the blocks is legit and not false smart contract.

Other App. Facilities

- **Block chain Explorer:**
  - **Movement Information Summary :**
    - Give insight to miner how much coin they get in Total.
    - Give insight to miner how much coin they get in last 50 days.
  - **Top 100 Coin Holders:**
    - Providing miners with insights into the **Top 100 Largest Coin Holders**.
  - **Top 100 Latest Blockchain Transactions:**
    - Providing miners with insights into the **top 100 most recent blockchain transactions.**
  - **Top 100 Validators**
    - Providing miners with insights into the **top 100 most active validators** within the blockchain.

Application Interface

- 1. Hardware Score:
  - CPU Speed in total (8 cores)
  - Memory and Hardware Hashing Power.
- 2. Hardware Score with booster option.
- 3. Hardware monitoring like:
  - CPU Speed
  - Hashing Power
  - Memory
  - CPU and Battery temperature.
  - Please be notice, not every phone can show CPU and Battery temperature.
- 4. Smart Contract to be used and executed by miners.
- 5. Menu to show dialog of:
  - Home.
  - Block chain Explorer .
  - Send and Receive.

K-BYTES as Comodity

- K-Bytes derives its value not from ease of acquisition, but from its inherent scarcity and rigorous validation. The **SHA-256 Proof of Work** mechanism and the decentralized **Validator** network ensure that even minting a single coin is a challenging process that can take several days.
- The true value of K-Bytes is built upon these core pillars:
  - **Verified Origin:** Every coin is the output of a formal **Work Order** and a **Certificate of Authenticity**.
  - **Military-Grade Security:** To ensure that tasks are genuine and not fabricated, the system utilizes a **One-Time Key (OTK)** backed by **AES-GCM 256-bit encryption** (military-grade).
  - **Complex Mining Synthesis:** The production integrates critical data points—**Task Level, Difficulty Level, Nonce, and Hash**—into a final **Delivery Order**.
  - **Automated Validation:** This Delivery Order is then electronically verified by other miners to confirm its legitimacy.
- In essence, **K-BYTES is a digital commodity, and your Android smart phone is the factory.**

Roadmap

- **Phase 1:**
  - Launch of the K-Bytes protocol and mobile mining application **(Completed)**
- **Phase 2:**
  - Global activation of Wallet features (Send/Receive) **(Completed)**
- **Phase 3:**
  - Product release to the Indonesian Crypto Community.
- **Phase 4:**
  - Securing Angel Investors for network development and the K-BYTES Website.
- **Phase 5:**
  - Listing on Crypto currency Exchanges.

Team

- **Leofwin Jovian Pranata** is the visionary behind **K-Bytes**, bringing over two decades of deep-rooted expertise in the technology sector. Since 2000, he has built a distinguished career as a **Programmer, System Analyst, and Application Designer**, specializing in **Database and Application Architecture** as well as **IT Management**.

- Driven by a commitment to transparency and a gesture of goodwill toward the Indonesian Crypto Community, Jovian has designed K-Bytes to be more than just a cryptocurrency. It is a mission to democratize mining through secure, accessible, and high-performance mobile technology.

- By combining his knowledge and technical background with AES-GCM 256 and SHA 256, he ensures that the K-Bytes ecosystem remains robust and fair for every participant. His ultimate goal is to foster a self-sustaining community where blockchain technology provides tangible benefits to all its users.

  - **Direct Contact:** +62 818 678 818
  - **Official Communication:** Leofwin.Jovian@Gmail.com

Closing & Disclaimer

We strongly encourage and direct you to read this entire section carefully. If you have any doubts or uncertainties regarding further actions, we recommend consulting with a legal, financial, tax, or other professional advisor.

- **Non-Security Status:** Please note and understand that the K-BYTES Coin and Application are not involved in, intended for, nor designed to constitute securities in any jurisdiction. This White Paper is not, and is not designed as, a prospectus or offering document of any kind. It is not intended to establish an offer of securities or a solicitation for investment in securities in any jurisdiction.

- **Safe & Free Mining:** All mining processes are free of charge, ad-free, and guaranteed safe from viruses, malware, or spyware. This application is specifically created for all members and crypto enthusiasts globally, and in Indonesia specifically. Currently, the official and secure application can only be obtained via www.k-bytes.id through Google Drive or by direct request to the developer via WhatsApp at +62.818.678.818.

- **Commodity Definition:** K-BYTES Coin is a digital commodity produced through electronic SHA-256 mining processes on mobile devices. It is not intended as a legal tender or a substitute for official currency in any country, including Indonesia.

- **Distribution & Third-Party Services:** To manage and distribute K-BYTES Coins, the Developer allows and suggests that miners transfer coins to others through regulated third-party escrow services (Rekening Bersama) that are properly licensed by the Indonesian government.

- **Hardware Responsibility:** The K-BYTES Developer is not responsible for the hardware of the miners. While the application is engineered for safe usage, excessive use without adequate cooling may cause device damage. The generally safe and normal CPU operating temperature for continuous processing is between **40°C and 48°C**. For temperatures exceeding 48°C, the use of external cooling is mandatory

Google Policies

- **Google Play Store Policy on Cryptocurrency Mining**
- The specific regulation governing this activity is found under the **Financial Services** section of the Google Play Developer Policy Center.

- **Policy Rule:** "We don't allow apps that mine cryptocurrency on devices. We permit apps that remotely manage the mining of cryptocurrency".

- **Official Explanation:**
  - **On-Device Mining Ban:** Google explicitly prohibits any application that utilizes the device's own computational resources (CPU/GPU) to execute mining algorithms, including SHA-256.
  - **Allowed Exception:** Applications are only permitted if their function is limited to **remote management**, such as monitoring mining rigs or controlling cloud-based mining operations that occur on external servers.

- **Reasoning for the Policy:**
  - **Hardware Integrity:** Mining operations put extreme stress on mobile processors, leading to significant **overheating** and potential permanent damage to internal components and batteries.
  - **User Experience:** Mining consumes excessive battery life and system resources, drastically degrading the overall performance and usability of the smartphone.
  - **Security Risks:** Many mobile mining apps have been identified as deceptive or containing malware (e.g., the *Loapi* malware) that can physically destroy a device through aggressive resource hijacking.

- **Summary of Enforcement**
  - Apps that violate this policy are subject to immediate removal from the **Google Play Store**. Developers must ensure their applications do not perform any local hashing or cryptographic calculations intended for mining purposes to remain compliant with the latest Google Play Console requirements

K-BYTES Response

Pernyataan Resmi Pengembang K-BYTES kepada Pengguna

- **Halo Pengguna K-BYTES,**
  - Sehubungan dengan kebijakan terbaru dari Google Play Store mengenai aktivitas penambangan di perangkat seluler, kami ingin menyampaikan beberapa poin penting untuk menjaga kenyamanan dan kepercayaan Anda:
- **Klarifikasi Operasional:**
  - Kami menyadari adanya dokumen kebijakan Google yang melarang aktivitas penambangan menggunakan sumber daya perangkat keras (HP). Kami ingin menegaskan bahwa **pernyataan atau kekhawatiran yang disebutkan dalam dokumen Google tersebut tidak terjadi pada K-BYTES.** Kami tidak membebani perangkat Anda dengan cara yang merusak integritas perangkat keras (seperti masalah baterai atau panas berlebih).
- **Kepatuhan terhadap Hukum:**
  - Meskipun kami memiliki standar operasional yang berbeda dengan asumsi dalam kebijakan tersebut, **K-BYTES sepenuhnya menghormati kebijakan Google.** Kami memahami bahwa sebagai platform distribusi, hal ini merupakan wilayah wewenang dan hukum Google yang harus dipatuhi agar layanan kami tetap dapat diakses oleh Anda.
- **Komitmen Kami:**
  - Fokus utama kami tetap pada memberikan pengalaman terbaik bagi pengguna tanpa mengorbankan performa perangkat Anda. Kami akan terus menyesuaikan sistem kami agar tetap selaras dengan regulasi yang berlaku tanpa mengurangi nilai yang Anda dapatkan dari K-BYTES.

Terima kasih atas dukungan dan kepercayaan Anda yang terus berlanjut.

Salam hangat,
Manajemen Pengembang K-BYTES

K-BYTES Response

Official Statement from K-BYTES Developers to Our Users

- **Dear K-BYTES Users,**
  - Regarding the latest Google Play Store policies concerning mobile device mining activities, we would like to clarify our position to ensure your continued peace of mind and trust:

- **Operational Clarification:**
  - We are aware of Google's policy documents regarding the prohibition of mining activities using local hardware resources. We wish to state firmly that **the concerns and scenarios described in Google's documents do not apply to K-BYTES.** Our application does not burden your device in a way that compromises hardware integrity, such as causing battery degradation or overheating.

- **Respect for Policy:**
  - Although our operational standards differ from the assumptions made in those policies, **we at K-BYTES fully respect Google's regulations.** We recognize that as our distribution platform, these policies fall within Google's legal territory and jurisdiction, and we remain committed to compliance to ensure our services stay available to you.

- **Our Commitment:**
  - Our primary focus remains on providing the best possible user experience without sacrificing your device's performance. We will continue to adapt our systems to remain aligned with current regulations while ensuring the value you receive from K-BYTES remains uninterrupted.

Thank you for your continued support and loyalty.

Best regards,
The K-BYTES Development Team
